

An innovative Socio-economic Development initiative changing lives of young scholars

Welcome back and wishing you an amazing and impactful 2023!

SolveSA is excited to announce that we have added another innovative solution to our existing list of Socio-economic Development initiatives which has already changed the lives of many young scholars. A short glimpse of this addition is as follows:

Maths & Science Learning Platform for High School pupils

This initiative consists of a learning platform which is revolutionising the way maths and science are taught to pupils. It utilises AI applications and innovative learning techniques to make these subjects more accessible and engaging for pupils. The programme has a particular focus on pupils from under-resourced and low-income areas in South Africa.

How does it work?

Each learner participating in the programme will receive a mobile device with uploaded curriculum content. Learners will also be provided with a portable solar charger to help them with power.

- The learners will receive guidance through the **Home Work Planner** application, ensuring that these students have exposure to exercises of the work they need to understand and to prepare for the yearly milestone exams.
- **Explanations in video format** are available to the learners to assist them where they need more understanding. The Connect To Educator application will allow learners to reach out to a tutor if they require further intervention.
- **The Dashboard** provides detailed breakdowns of a participating group's performance and individual performance metrics, allowing facilitators to identify problem areas quickly and apply the necessary course correction, both at a group and personal level.
- **Sponsors will receive reports** which indicate the learners' performance and indicate learners who show a higher dedication for future consideration for bursaries or other opportunities.

Assisting learners to access to this math and science platform will significantly impact the education and prospects of learners in underprivileged communities.

Claim your SED points

The Programme is urgently looking for sponsors for a group of Grade 11 pupils at a number of under-privileged schools in the Cape Flats region for the duration of their 2023 school year. Sponsors will not only be able to claim their SED points, but also make a real impact in the lives of these young adults.

If you need more details on this, or any of SolveSA's other solutions, please give us a call!
